Grünhain-Beierfeld, Germany | Remote contract work worldwide

PROFESSIONAL SUMMARY

I help IT teams when manual operations take up too much time, migrations stall or complex infrastructure issues hold projects back. I automate Linux and Windows environments, build repeatable deployment and migration workflows and troubleshoot issues across systems and applications. Documentation and knowledge transfer are part of my work, so internal teams can maintain the solutions independently.

SELECTED RESULTS

- **Automation:** Reduced manual effort for selected deployments, migrations and server provisioning workflows by approximately 60% using Ansible.
 - **Atlassian:** Independently planned and completed over 20 cloud migrations within scheduled maintenance windows. Verified complete transfer of the data in scope for each migration.
 - **Monitoring:** Built and maintained monitoring for over 600 systems. Enhanced monitoring plugins and tuned alert thresholds to detect issues earlier and reduce the burden on on-call teams.
-

CORE SKILLS

Automation & IaC: Ansible (8 years), Python (8 years), Terraform, Puppet, PowerShell and Bash

Cloud & Containers: Azure, AWS, Docker, Docker Compose, Kubernetes, OpenShift and Helm

CI/CD & GitOps: Git (9+ years), GitHub Actions (3+ years), Jenkins, ArgoCD and Bitbucket

Atlassian: Jira, Confluence, Bitbucket and Bamboo (4+ years)

Monitoring: Prometheus, Grafana, Icinga2, Nagios, Telegraf, InfluxDB and ELK Stack

Systems & Security: Linux, Windows Server, VMware, Proxmox, SSL/TLS, PKI, SELinux and hardening

WORK EXPERIENCE

Independent Consultancy

Nov 2022 to Present

Freelance DevOps Engineer | Infrastructure Automation & Atlassian

- **Insurance:** Automated deployments, migrations and server provisioning with Ansible for part of an environment comprising over 500 servers. Reduced manual effort for these workflows by approximately 60%. Migrated applications to Kubernetes, enabling the previous servers to be decommissioned.
- **Energy:** Assessed technical feasibility in an evaluation project to replace an industrial process data platform. Identified and resolved an issue with an encrypted data connection.
- **IT services:** Administered Jira and Confluence Data Center environments for multiple clients, including environments with over 1,000 users. Availability target: 99.9%.
- **Software vendor:** Provided technical support to over 40 enterprise customers and independently resolved approximately 80% of my cases without escalation to other specialists.

WORK EXPERIENCE

demicon GmbH

Aug 2021 to Oct 2022

Atlassian Consultant & IT Administrator

- Planned and delivered Atlassian Server and Data Center to Cloud migrations, including requirements analysis, test migrations and data validation.
- Administered enterprise Atlassian environments and handled upgrades, maintenance and complex technical issues.

STAGIL GmbH

Oct 2018 to Jul 2021

Atlassian Consultant & IT Administrator

- Managed hosting, provisioning and monitoring of Atlassian environments and provided technical consulting.
- Independently organized, designed and implemented a Jira and Confluence Data Center rollout on site for Samsung in the Taunus region of Germany.

Across Atlassian engagements: Supported over 20 customers, completed more than 20 cloud migrations and upgraded over 60 instances. Operated environments with over 5,000 users.

T-Systems Multimedia Solutions GmbH

May 2013 to Oct 2018

System Engineer

- Developed over 30 Puppet modules to automate software installation, server configuration and application deployment across more than 80 Linux servers.
- Built and maintained monitoring for over 600 systems. Worked in a virtual team supporting multiple teams, enhanced monitoring plugins and tuned thresholds to detect and resolve incidents sooner and improve on-call alerting.
- Designed and built an OpenShift platform for over 50 developers together with other system engineers.
- Designed and deployed an IBM WebSphere eCommerce platform with a 99.9% availability target.

DAS Environmental Expert GmbH

Aug 2011 to May 2013

IT Administrator

- Built a monitoring solution covering approximately 50 IT systems and devices.
- Handled approximately 80 incidents per month and served as the sole IT administrator for part of the engagement.
- Used monitoring to identify critical incidents approximately 60% sooner.

EDUCATION

Berufsbildungswerk Dresden, Germany

2008 to 2011

Vocational training in IT System Integration (Fachinformatiker für Systemintegration), IHK qualification awarded in 2011

LANGUAGES & CERTIFICATIONS

Languages: German (Native), English (C2)

Certifications & training: ITIL Foundation for IT Service Management; IBM WebSphere Commerce V7 System Administration; Implementing Microsoft Azure Infrastructure Solutions (MOC 20533); Configuration Management with Puppet; Introduction to Docker and Docker Swarm
